

CATALOG OF AVOCADO ROOTSTOCKS IN USE IN ISRAEL

A. Ben-Ya'acov, Esther Michelson and I. Sela,

Agricultural Research Organization, Volcani Center, Bet-Dagan, Israel

In a long term large-scale field research that took place in Israel and was described elsewhere, avocado seedling rootstocks were selected and clonal ones were developed. In the present article the selected rootstocks, which are recommended for commercial use, and listed, followed by a short description of the cultivars and the places where they were investigated and selected. The catalog includes 5 groups of rootstocks:

1. 23 Mexican seedling rootstocks.
2. 10 Mexican clonal rootstocks.
3. 24 West-Indian seedling rootstocks (and another 12 which are just mentioned by name).
4. 23 West-Indian clonal rootstocks.
5. 3 Guatemalan rootstocks.

The catalog is based on 29 publications, which served as a source of information for the included data.
