

A Comprehensive Nursery Management Solution

© A.H. Ernst & Seuns (Edms) Bpk

Introduction

- In order for a business to remain competitive in its marketplace it is necessary for that business to be highly efficient in its management.
- According to this, the need for a computer software management solution in the Avocado nursery industry was identified in 1998 by Allesbeste Nursery.
- A software program specifically for the above purpose has been developed, and
- extensively used by the Nursery throughout the development process since 1999.
- Ready to be tested by other interested nurseries in order to identify needs that are not yet catered for, thereby making this program a management tool well suited for all.

Introduction

Program consists of :
Client database
Stock database
Ordering and delivery

Supports the Micro Cloning technique

Client database

Client contact information

- Farm information
 - Per orchard/block information
- Liaison information
 - Records of contact made between client and nursery
- Sales information
 - Information regarding current and previous orders and their deliveries

- Stock database
 - □ Mother tree information
 - Keeps information from mother trees where seed are harvested.
 - □ Block
 - Cultivar
 - Tree number
 - □ etc...

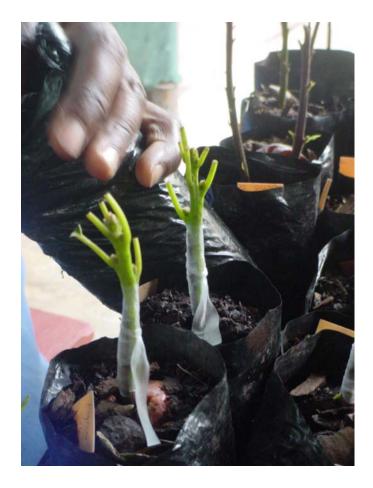

Planting of seed

- Information regarding planted seed
- Links to mother tree where seed came from

Grafting

- Nurse grafting for clonal plants
- Cultivar grafting for seedling plants

Nurse grafting

- Scion (future rootstock) is chosen to graft onto chosen nurse seedlings
- A worker is specified as grafter graft bonuses
- Cultivar grafting
 - Seedlings Scion is grafted onto chosen seedling plants
 - Clonal plants Scion is grafted onto rooted clonal rootstocks
 - A worker is also specified as grafter

Etiolation

 After nurse grafting plants will go into etiolation in preparation for rooting.

Rooting

 Rooting will take place on etiolated shoots

Cutting / Severing
Micro Clones are cut from the nurse seedling plants

Planting out

- Planting out of seedlings or Micro Clones into large bags
- Plants are then located in large bag area

□ Large bag area

- Plants are located in specific rows
- Plants ready for delivery are moved to designated loading areas

- Order / delivery
 - Enquiry
 - Used to keep record of enquiries by potential clients
 - Order
 - Orders submitted by clients are recorded by the program
 - Pending delivery
 - When the required deposit is received from the client, the order moves on to be a pending delivery

Delivery

- When physical delivery of plants take place the program will issue a delivery note
- Plants on the loading areas will be allocated for delivery and removed from stock

Conclusion

- Ahuacatl can be successfully used in the computerization of management tasks in an avocado nursery, thereby relieving a large part of the administrative burden on managers.
- This is accomplished by the automation of client, stock and sales administration as well as putting a wealth of information at the fingertips of an avocado nursery manager.
- The advantages over a paper-based system, or even using Excel or similar applications, are clearly evident.
- Allesbeste Nursery has already demonstrated the successful use of Ahuacatl through their extensive reliance on the software for their day-to-day management tasks.

Thank you!
