

ACKNOWLEDGMENTS

The author acknowledges the following people and organisations:

- 1) Professor B. N. Wolstenholme, University of Natal, for his encouragement, advice, guidance and friendship both before and during the period that this research covers;
- 2) Professor B. Schaffer, University of Florida, co-supervisor and mentor for many aspects of my research activities reported in this dissertation;
- 3) Mr K.G. Pegg, Senior Principal Plant Pathologist, Department of Primary Industries Queensland, Indooroopilly, friend and colleague who has provide stimulating ideas, advice and assistance during the past 20 years of our collaborative research programs;
- 4) Mr Jack Saranah, Department of Primary Industries Queensland for technical assistance with research projects and without whose commitment I could not have reached my current level of achievement;
- 5) Dr R.A. Stephenson (Maroochy HRS), and Mr B.W. Cull and Mr C.W. Winks (formerly of Maroochy HRS) Department of Primary Industries Queensland for their support and encouragement;
- 6) The Department of Primary Industries Queensland for financial assistance and resource support;
- 7) The Queensland Fruit and Vegetable Growers, the Australian Avocado Growers' Federation, Horticultural Research and Development Corporation and the Rural Industries Research and Development Corporation for financial support of some of the research activities reported in this dissertation;
- 8) The University of Florida (Tropical Research and Education Centre, Homestead) and the South African Avocado Growers' Association/Institute for Tropical and Subtropical Crops for financial assistance in 1989/90 which provided the opportunity to research aspects of avocado physiology in Florida and South Africa;
- 9) Spencer and Lyn Gray of Maleny, Queensland and John and Jay Dorrian of Childers, Queensland for the use of their farms and their patience and tolerance over many years of cooperative investigation;

- 10) Mr Trevor Rasmussen, Department of Primary Industries Queensland for providing the carbohydrate analyses reported in this dissertation;
- 11) Vivienne Doogan, Department of Primary Industries Queensland for assistance with statistical analyses;
- 12) Dr D.W. Turner, University of Western Australia for his assistance with interpretation of data; and
- 13) Mr P.A. Hargreaves, Mr P.W. Langdon and Ms L.J. Ruddle, Department of Primary Industries Queensland; Dr M.M. Blanke, University of Bonn; and Mr S.P. Lara, University of Florida for their collaborative input and assistance in the respective research programs in which they have participated.

**To my wife Dorothy and daughters Sian and Sarah, for their
support and understanding for the many hours of family time
surrendered in the pursuit of science.**
